**Dear Gjirafa, Inc**

**Re: Internship position**

I am writing to you to apply for the Internship position in your Company, which has been published online in life.

I am a student at Universum College in the Department of Computer Science, I am not in the field of deep IT but I know the basics of this profession, but in the faculties it is very difficult to learn the logic of programming.

I have attached my CV to support my application.

I have basic programming skills, I know the basics, I know boolean algebra, from the technologies we learned old html, css and javascript, I have some basic knowledge in Vue.

I have knowledge in penetration testing as well as average ethical hacking, usually for ethical use of linux because we have tools ready in the Linux operating system, operating systems that have been created for cyber security students.

I participated in several "Hackathons" events, the last one was in Prishtina funded by the American embassy and the event was organized by "Albanian Cyber".

I would like to have the opportunity to be part of this internship, as it is free, the degree of professors who will give lectures and the type of teaching that will be done as at Harvard University.

Thank you for considering my application. I look forward to hearing from you.

You honestly,

**Dijar Smakolli**
