PROJECTS

ASP.NET CORE

● Job Portal Application

This is an application built in C# that serves as a job portal. It includes functionalities such as:
User registration and authentication (job seekers and employers).
Job posting by employers.
Job applications by candidates.
Searching and filtering jobs based on category and location.
Managing user profiles.

REACTJS

● E-Commerce App

This is a simple E-commerce project built with React and Vite. It includes: Homepage with products, Product details page , Checkout with localStorage , Ability to add products via a form , Local backend with JSON Server.

PYTHON

● NBA App

This is an application built with the Python programming language, which allows viewing and analyzing statistics of teams and players in the NBA. The application uses some of the most powerful Python libraries to retrieve and present data in a visual and interactive way.
